FOR ELECTRICIANS, INSTALLERS AND ELECTRICAL ENGINEERS

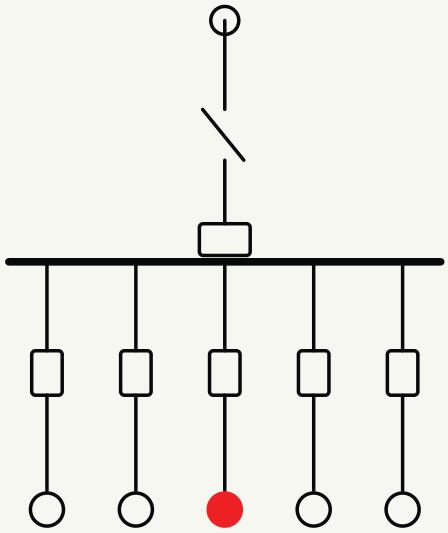

Condui

Electrical diagrams. Created and updated online.

Condui is an electrical suite for creating and updating Belgian single-line and situation diagrams online, with built-in checks supporting AREI requirements and clear documentation per project. It is made for electrical work, not a general-purpose drawing or CAD package.

BUILT FOR

- Electricians
- Electrical installers
- Electrical engineering firms

TYPICAL CHALLENGES

01

Diagrams take hours in general drawing tools.

Condui is built specifically for single-line and situation diagrams, so the work starts from electrical concepts instead of loose lines.

02

Mistakes surface late, during the inspection.

Built-in checks supporting AREI requirements show errors while you draw, not after the inspection.

03

Project documentation ends up scattered.

Diagrams and documentation stay together per project, online, ready to update when the installation changes.

WHAT CONDUI DOES

Single-line diagrams

Create and update Belgian single-line diagrams of an electrical installation online.

Situation diagrams

Draw the situation diagram that goes with the installation, in the same project.

Built-in checks

Errors show while you draw, with checks supporting AREI requirements. They do not replace an electrical inspection.

Clear project documentation

Keep the diagrams and documentation of each installation together, clearly organised per project.

Online, nothing to install

Work in the browser, with nothing to install, and pick up a project again when the installation changes.

Per project or per month

Use Condui for a single project or on a monthly basis, depending on how often you need it.

IN PRACTICE

ILLUSTRATIVE EXAMPLE

Documenting a renovated home installation

An installer renovates the electrical installation of a house and has to deliver up-to-date diagrams for the inspection.

01 Create a new project for the installation in Condui.

02 Draw the single-line diagram of the distribution board and circuits.

03 Add the situation diagram of the rooms and outlets.

04 Correct the errors the built-in checks show while drawing.

05 Keep the documentation with the project, ready for the inspection and later changes.

The installer arrives at the inspection with clear, current diagrams, and can update them when the customer extends the installation.

WHY CONDUI

Made for electrical work

Purpose-built for Belgian single-line and situation diagrams, not adapted from general CAD.

Errors while you draw

Built-in checks supporting AREI requirements flag errors as you draw, before the inspector arrives.

Pay for how you work

Per project for occasional use, or per month for regular work.

GETTING STARTED

- Try the interactive demo, in English or Dutch.
- Start with one installation you are working on now.
- Choose per project or per month.
- Contact us for questions about Condui or larger teams.

Software checks support preparation; they do not replace an electrical inspection. Condui is not an inspection body and does not issue approvals.

Try Condui on your next installation.

Open the interactive demo and draw your first diagram, or contact us with your questions. We reply personally.
